

Wyld Networks and IoTMaxi form partnership to deploy sensor-to-satellite IoT in Brazil

Wyld Networks today announce a partnership to deliver IoT data in agriculture and utilities with Brazilian Internet of Things company, IoTMaxi. Wyld's satellite connectivity will connect IoTMaxi's sensor portfolio to the IoTMaxi analytics platform providing valuable data insights for their customers.

IoTMaxi, a company dedicated to the development of Platform Management monitoring, is seeking to optimize preventive and corrective maintenance and significantly reduce costs and increase infrastructure uptime in regional power distribution networks and other utilities infrastructure. IoTMaxi reliably connects data from infrastructure assets to the people who need the data in order to make informed business decisions.

Working with major mobile operators and carrier companies, IoTMaxi are also seeking to deliver reliable and functional asset monitoring to manage the health of agriculture and the environment. IoTMaxi's GPS integrated agtech sensors monitor temperature, NOC and humidity as well as dispersion of water and nutrients in soil. This data helps save significant costs per harvest and with Wyld's 100% connectivity coverage will enable IoTMaxi to extend their market opportunities across the continent.

"IoT allows businesses to clearly predict and optimise potential efficiencies, profits and sustainability targets," Said Eduardo Cozza, CEO of IoTMaxi. "With Wyld's satellite IoT solution we can strengthen our solutions even in remote areas where there is no cellular coverage."

"Remote infrastructure and agriculture are notoriously difficult to digitise," said Alastair Williamson, CEO of Wyld Networks. "Wyld are delighted to be working with IoTMaxi to combine our solutions to solve these connectivity issues for the internet of things across 100% of the region."
