

Wyld Networks announce that IMAE have commenced the deployment of Wyld Connect Terminals in Brazil

IMAE, a company in Brazil, have begun deployment of Wyld Connect terminals. Wyld Network's satellite and terrestrial IoT solution collects data from IoT sensors in IMAE wind turbines to improve and optimize the management of wind power assets.

Brazil is the largest producer of wind energy in South America adding approximately 1.8GW of wind generation per annum. IMAE produce next generation wind turbines and are deploying Wyld's IoT sensor-to-satellite solution with their solution in locations where there is no terrestrial connectivity. This data is delivered via Wyld' Networks' network management platform, Wyld Fusion, and then delivered to IMAE's data analysis solution.

Wyld Networks are now deploying their suite of modules, modems and terminals across the world, connecting the Internet of Things via low earth orbiting satellites and bringing data from remote locations directly to end user apps.

"We are excited to continue support for IMAE in their mission to provide innovative monitoring solutions for wind energy installations in Brazil," said Alastair Williamson, CEO of Wyld Networks. "Advancing this order into the deployment phase is a significant milestone, demonstrating progress and alignment with our objectives of fostering growth and boosting revenues."

About Wyld Networks AB

Wyld Networks develop and sell innovative wireless technology solutions that enable affordable connectivity anywhere in the World, addressing the problems for businesses and people regarding the lack of global mobile network coverage. The solutions are mainly targeted to wireless connectivity for the Internet of Things (IoT) and people.

Wyld Networks Ltd was formed in Cambridge, UK in 2016 and is a wholly owned subsidiary of Wyld Networks AB. The Wyld Networks share (WYLD) is traded on the Nasdaq First North Growth Market. Certified Adviser is Mangold Fondkommission AB (tel +46 8-5030 1550, email ca@mangold.se).
