

Wyld Networks to deploy satellite IoT solutions for HartBR after signing partnership agreement

Virtual satellite operator Wyld Networks today announce a partnership with HartBR, a Brazilian IoT equipment supplier, to provide connectivity for energy distribution infrastructure in remote locations.

HartBR is a Brazilian IoT equipment supplier, based in Alphaville, São Paulo, with existing LoRa solutions for energy, smart grids and telecommunications. Wyld Networks will provide 100% national coverage for HartBR IoT sensors and devices starting with satellite connectivity to connect fault indicator sensors deployed on high voltage transmission lines.

HartBR is one of the main suppliers of technology to Energisa (Grupo Energisa) - one of the largest energy distribution groups in Brazil with 8.0 million consumers in eleven Brazilian states.

HartBR's sensors identify temporary and permanent faults providing invaluable data to the utility provider enabling them to have visibility on conditions, reduce maintenance visits and increase efficiencies. With Wyld's satellite IoT technology, HartBR's sensors can operate anywhere, even outside areas of cellular connectivity. This 100% coverage will bring huge potential growth for HartBR to reach previously inaccessible areas of Brazil.

"To meet the data demands of energy distributors in Brazil we need to enable our sensors in every location even where cellular coverage is unavailable," says Celso Garcia co-founder of HartBR. "Wyld's fantastic sensor to satellite connectivity means we no longer view remote locations as a challenge."

"Monitoring infrastructure in the challenging world of energy distribution requires great technologies coming together," said Alastair Williamson, CEO of Wyld Networks. "Wyld are delighted to be partnering with HartBR to combine cutting edge sensors with cutting edge connectivity to bring previously inaccessible data directly to HartBR's energy distribution partners."

About Wyld Networks AB

Wyld Networks develop and sell innovative wireless technology solutions that enable affordable connectivity anywhere in the World, addressing the problems for businesses and people regarding the lack of global mobile network coverage. The solutions are mainly targeted to wireless connectivity for the Internet of Things (IoT) and people.
