

SeaTwirl appoints Leif Delp as Senior Strategic Advisor

SeaTwirl AB today announces that Leif Delp has been engaged as Senior Strategic Advisor to the company. Delp brings extensive experience in the energy sector and floating offshore wind, including senior roles at Equinor, where he played a central role in the development of Hywind, the company's pioneering floating wind technology.

The appointment is part of SeaTwirl's strategy to accelerate the development and commercialisation of its innovative floating vertical-axis wind turbine technology.

"Leif is one of the most experienced professionals in floating offshore wind. He has been instrumental in building an industry from the ground up and brings a unique combination of technical, commercial and strategic expertise. His experience in taking the Hywind concept all the way through, from an idea through prototypes and pilots to the leading technology it is today, is extremely valuable for us. Leif's decision to engage with SeaTwirl is a strong endorsement of the potential of our technology and our long-term vision," says Johan Sandberg, CEO of SeaTwirl.

SeaTwirl develops a new generation of floating wind turbines aimed at reducing the cost of offshore wind through a simpler design, lower material usage and more efficient maintenance. The company's technology addresses several of the key challenges currently limiting large-scale deployment of floating offshore wind.

As Senior Strategic Advisor, Leif Delp will provide strategic guidance within market development, industrial partnerships, project development and commercialisation. He will also support the company in discussions with industrial stakeholders, investors and other key partners.

"The global floating offshore wind market is expected to experience significant growth in the coming decade. Success will require not only new technology, but also solutions that enable lower costs and improved scalability. SeaTwirl is developing a highly interesting technology with the potential to play an important role in the future energy system, and I look forward to contributing to the company's continued development," says Leif Delp.

SeaTwirl has been led since 2023 by Johan Sandberg, who has worked in floating offshore wind since 2008 and previously held senior positions at DNV and the Aker group, where he was responsible for development of standards, business development and commercialisation within floating wind.

About SeaTwirl

SeaTwirl AB is a Swedish energy-tech company within offshore wind power with the purpose to enable floating offshore wind - wherever it is needed. SeaTwirl's unique floating vertical-axis wind turbine has a low center of gravity, a slim substructure, and a generator house accessible at the Sea surface enabling small, cost efficient, and locally available vessels to maintain it. The company is listed on Nasdaq First North Growth Market since 2016. Read more at: <https://seatwirl.com>

The company's Certified Advisor is Tapper Partners AB.
