

Wyld Networks and Brinja sign agreement to deploy satellite IoT solutions in Sweden

Wyld Networks today announce a partnership with Brinja, a Swedish specialist IoT hardware and software company, to offer satellite connectivity for IoT solutions for the construction industry and dispersed asset infrastructure monitoring.

Brinja manage multi-faceted IoT projects including construction site management, energy saving lighting control and automated concrete measurements for companies such as Skanska and NCC. Their data-driven strategies, increase efficiencies for operations, and enable more informed business decisions. Brinja's solutions raise safety levels, lower costs and allow for better control over, for example, relative humidity, noise levels and dust particle accumulation.

The Wyld Connect satellite IoT solution provides 100% global coverage for connecting sensors and devices and will integrate with Brinja sensors to expand deployment of the IoT for their customers. This will increase data flow into Brinja's analytics platform increasing the value of their customer offering.

Sensor-based digitisation is leading to significant tangible benefits for construction businesses across the globe. The combined technologies of Brinja and Wyld will accelerate this digitisation and reduce the need for high-cost terrestrial network infrastructure.

"Brinja are seeking low power low cost IoT connectivity solutions to enhance our ability to deliver profit generating IoT," says, Xavier Leon, CEO of Brinja. "The 100% coverage of Wyld solves the massive issue of lack of network coverage across Sweden and beyond."

"The demand for data is being held back by a lack of global coverage," said Alastair Williamson, CEO of Wyld Networks. "Wyld are delighted to be partnering with Brinja to meet this challenge by connecting IoT sensors directly to low earth orbiting satellites."
