NON-REGULATORY PRESS RELEASE

Wyld Networks working with Harper Adams University in the UK monitoring soil data via Wyld Connect satellite IoT

Harper Adams University is the foremost university in the UK for agriculture, animal and rural management, and environmental management. It has set the gold standard for UK agricultural research, tackling some of the most pressing issues facing the world – food security, land management, sustainability and climate challenges.

Wyld are working with Harper Adams to monitor soil for crops with an initial project to deliver soil moisture data for brassicas within the 550 hectares of the Harper Adams research fields in Shropshire UK. Managing soil health and water usage are key to maximising yield, reducing inputs and meeting sustainability targets. The total annual global brassica market size is estimated at around \$25-30 billion USD.

The Wyld Connect satellite IoT solution is already in field with data flowing into Wyld Fusion.

“We are delighted to be working with Harper Adams University who bring access to specialized knowledge, research facilities, real-world testing environments, and a network of industry connections,” says Alastair Williamson, CEO of Wyld Networks. “Our solution not only solves connectivity challenges for Harper Adams but demonstrates the power of satellite IoT for the 85% of the earth urgently seeking to digitise agricultural processes.”
