### **Background and rationale in summary**

Dicot is developing the drug candidate LIB-01 (formerly Libiguin), which will be a potency agent to better treat erectile dysfunction and premature ejaculation. The ambition is to create a drug with significantly longer effect and far fewer side effects, compared to those on the market. Today, at least 500 million men suffer from these sexual dysfunctions and the market is valued at SEK 50 billion.

LIB-01 has its origins in the research conducted at Uppsala University by Professor Jarl Wikberg to treat sexual disability. Previous animal trials and the traditional folk medicine use from Madagascar demonstrate the potential for LIB-01 as treatment of erection problems and premature ejaculation. Research and development are conducted under own auspices up to phase 2 studies. Thereafter, Dicot's intention is to form strategic alliances, or alternatively carry out a trade sale, with larger, established pharmaceutical companies to be able to introduce LIB-01 on the world market.

The Company is concluding the issue of units the purpose of finalizing the Dicot's pre-clinical program and commence the preparations for clinical stage 1.
