## Politicians from the Norwegian parliament visit Røyrvik and the Joma mine

Bluelake Mineral AB (publ) (the "Company" or "Bluelake Mineral") is, as previously announced, via its Norwegian subsidiary Joma Gruver AS, working with the permit process in Norway to implement a so-called plan program and to obtain an approved zoning plan which is a detailed plan for the industrial area for the proposed mining operations in Joma in Røyrvik municipality in Trøndelag county. A delegation of politicians from the Norwegian Parliament (*Norwegian Stortinget*) and the governing party, the Labor Party, has visited Røyrvik and the Joma mine. The objective of the visit has been to find out about Joma Gruver's plans to restart the mine and to meet representatives of the Company, the municipality and other parties.

The delegation from the Labor Party included staff from various committees of parliament including people from industry, transportation, finance and municipal committees. The visit takes place at the same time as Norway presents a new so-called mineral strategy in which Norway declares its ambition to become a leading nation in the area as the demand for metals and minerals is substantial, and to enable the green transition away from fossil energy sources. During its visit to Røyrvik, the delegation from the Labor Party made a site visit to the Joma mine and also met representatives of Joma Gruver, Røyrvik municipality, the local business community and Tjåehkere sate (the reindeer herders).

### General information about the Company

*Bluelake Mineral AB (public) is an independent Swedish company active in exploration and mine development of copper, zinc, nickel and gold resources.*

*The Company owns approximately 99% of the subsidiary Vilhelmina Mineral AB, which is focusing on development of copper and zinc deposits in the Nordic region. In Sweden, the Company owns Stekenjokk-Levi project, where a total of approximately 7 million tonnes of ore were mined between 1976 and 1988 with an average grade 1.5% Cu and 3.5% Zn. Stekenjokk-Levi is, according to a recent Mineral Resource Estimate by SRK Consulting, containing inferred mineral resources of approximately 6.7 million tonnes with 0.9 % Cu, 2.7 % Zn, 0.6 % Pb, 55 Ag g/t and*

0.2 g/t Au for Stekenjokk and inferred mineral resources of 5.1 million tonnes with 1.0 % Cu, 1.5 % Zn, 0.1 % Pb, 22 Ag g/t and 0.2 g/t Au for Levi (at a NSR cut-off of 60 USD/t). In Norway, the Company is owner of Joma Gruver AS which holds exploitation rights for the Joma field, where approximately 11.5 million tonnes of ore were processed between 1972 and 1998 with an average grade of 1.5% Cu and 1.5% Zn. The Joma field (excluding Gjersvik) is, according to a recent mineral estimate by SRK Consulting, containing indicated mineral resources of approximately 6 million tonnes with grades amounting to 1.00 % Cu and 1.66 % Zn and inferred resources of 1.2 million tonnes with grades 1.2 % Cu and 0.7 % Zn (at cut-off of 50 USD/t).

In addition, the Company holds exploitation concessions for the nickel project Rönnbäcken (which is Europe's largest known undeveloped nickel resource) and an exploration permit for Orrbäcken, both which are located in Sweden. According to a recently updated mineral resource update in by the mining consulting company SRK, the Rönnbäcken project contains a mineral resource of 600 million tonnes with an average grade of 0.18% Ni, 0.003% Co and 5.7% Fe ("measured and indicated"). The updated preliminary economic assessment that SRK completed predicts a production of 23,000 tonnes of nickel, 660 tonnes of cobalt and 1.5 million tonnes of iron per year for 20 years, which would be a significant share of Sweden's total annual use of nickel which thereby has a strategic value. Orrbäcken is considered to have potential as a nickel deposit.

Further, the Company holds an exploration permit for Kattisavan which is considered to have potential as a gold resource and is located within the so-called gold line, close to projects such as Svartliden, Fäboliden and Barsele.
