

Press release 2022-10-08

Unibap receives an ATP (Authorization to Proceed) from US distributor, Moog Inc.

Unibap's US distributor and technology licensee Moog Inc. has given Unibap an ATP (Authorization to Proceed) to start work on an expected hardware order with a value of MUSD 1.69 while the contractual details are being finalized. The expected order is for products within Unibap's iX10 platform, for delivery during the second quarter of 2023. The iX10 is based on the 14 nm AMD Ryzen V1000 family, which offers superior on-orbit processing performance and that are compatible with AMD's high-performance library (HPC) called ROCm.

The ATP received from Moog ensures that Unibap can initiate, and get compensation for, work related to the expected order, before a contract for that order has been signed. The ATP is not a confirmation that the order will be received. However, Unibap can now allocate resources and initiate work and the ATP ensures that Unibap will receive financial compensation for that work independently if the order is received or not.

- We have proved our proficiency with several in-orbit demonstrations of our iX5-100 computers, and as a result we also see a significant growth in market interest for our next-generation SpaceCloud® solutions in the iX10 family. With the announced deliveries and the collaboration with Moog, we continue our exciting and important journey with our next generation systems for on-orbit edge computing says Lena W Jansson, CEO
