

Absolent Group aims to be carbon negative by 2050

Absolent Group has set two ambitious targets. The first target is to reach net zero carbon emissions from Absolent Group's own operations by 2030 and the second target is to have net negative carbon emissions from Absolent Group's value chain by 2050.

Absolent Group will reach carbon neutrality and become carbon negative by reducing emissions through operational efficiencies, procurement of renewable energy, electric mobility and direct air capturing.

Absolent Group aims to have complete control of its carbon reduction technologies. Therefore, the group has chosen to intensify the development of direct air capturing solutions.
