Medclair AB (publ)

Medclair enters new market – first installation in Belgium

Medclair takes another step in its international expansion. Thanks to the collaboration with Dutch partner Grodenta, there will soon be three mobile nitrous oxide destruction units operating in Belgium, a new market for Medclair.

“Grodenta has been a strong partner in the Netherlands, and through their network, we’ve been able to take the step into Belgium. We see Belgium as a market with great potential and an important part of our continued European expansion,” says Simon Lewis, International Business Developer at Medclair.

Belgium has a well-developed healthcare system with over 100 hospitals and more than 8,000 dentists, where nitrous oxide is used in, among other areas, maternity care and dentistry. Interest in sustainable nitrous oxide management is rapidly increasing, driven by climate goals and a focus on improving working conditions, which makes the potential for additional installations significant.

Jonas Lundh
CEO
Medclair AB

Medclair is a Swedish cleantech provider and a leader in safe and environmentally friendly nitrous oxide destruction. Operating in twenty countries, Medclair offers innovative solutions that significantly reduce the climate impact of nitrous oxide while improving workplace safety.

The company is listed on NGM Nordic SME. More information about Medclair can be found at www.medclair.com.
