

Press release

Keolis approves its first delivery of GEPS®

[Stockholm 21th August 2019.] Nasdaq First North listed H&D Wireless AB, has previously announced the agreement from Keolis, a major bus and transport company to streamline operations at its bus depots. H&D Wireless has now successfully completed the installation of GEPS® for Yard Management, using its real-time positioning solution (RTLS), at the Hornsberg and Bromma depots in Stockholm. Now Keolis has approved the delivery for GEPS®, launching the start of commercial operations.

The project was expanded from the original plan of covering just one to two depots, after a fire broke out at the Keolis Hornsberg site in December 2018 reducing its capacity. The system has been installed at both the main Hornsberg and auxiliary Bromma depots. *GEPS for Yard management* will be used to streamline the bus depot operations and facilitate maintenance planning and repair to save staff time and increase visibility. H& D Wireless was responsible for conceptualization, development, installation, configuration, optimization, addition of WiFi / Internet access. After system and field testing of GEPS by H&D Wireless, Keolis has now approved delivery, which means start of commercial cloud service.

The contract for the Hornsberg depot is for two years and corresponds to a deal value of SEK 1.2 million. In the agreement, Keolis has also issued an intent to extend the contract to all five depots in Stockholm area after further evaluation.

– Jan Kilström, CEO Keolis Sverige AB said, “We have high expectations for the H&D Wireless solution. The staff at Hornsberg depot can already see clear improvements in their operations after they have gained access to GEPS®. The system visualizes and streamlines the handling of how we find buses at the depot, which was a task that until now had been handled completely manually with a lot of extra work, risk of delays and potential misunderstandings. We are enhancing our operations to deliver the best possible service and in the long run, win more tenders in a fiercely competition marketplace. Assuming the commercial service of GEPS® runs well, we can now proceed with planning the roll-out to other depots according to the Dec’2018 LOI.”

This information is such that H&D Wireless AB is obliged to disclose in accordance with the EU Market Abuse Regulation. The information was submitted, through the contact person below, for publication 12:00 CET on August 21th, 2019.
