Qbrick adds AI Discovery to Agent API, helping AI agents find and understand enterprise video

Qbrick AB (publ) today announced AI Discovery, a new capability within Qbrick Agent API designed to help AI agents, search engines and AI agent services discover and understand enterprise video.

Building on the **Qbrick Agent API** introduced in April 2026, AI Discovery adds structured, machine-readable information to video content, extending the offering from autonomous video workflows to video discovery.

The use of AI agents is changing how people find information. When users receive answers directly from AI services, they may no longer visit a company's website, potentially reducing organic search traffic and opportunities to engage customers. This makes it increasingly important for companies to ensure their content-including video-can be discovered and understood by AI agents and AI-powered search services.

"Most video libraries were built for human viewers. Now companies also need to consider how AI agents discover and interpret that content. With AI Discovery, we help customers make their videos more accessible to AI agent services and create more opportunities for their content to be found," said Krister Karjalainen, CEO of Qbrick.

AI Discovery is available now as part of **Qbrick Agent API**.

About Qbrick
Qbrick AB (publ) is a Swedish SaaS and AI company specializing in video communication. The company provides a cloud-based platform that serves as a central infrastructure for video communication, enabling businesses and organizations to create, manage, and distribute live and on-demand video at scale in a secure manner and with high regulatory compliance, supported by AI

and interactive capabilities. The platform is used for both internal and external communication workflows, such as financial communications, training, sales and presentation materials, and live events. Qbrick was founded in 1999 and operates wholly owned subsidiaries in Sweden, Norway, Denmark, and Finland. The company is headquartered in Stockholm, and its shares are listed on the NGM Growth Market.
