

## AAC Clyde Space wins SEK 6.6 M order

**2024-12-16 AAC Clyde Space AB (publ)**

**AAC Clyde Space has won a EUR 0.6 M (approx. SEK 6.6 M) order for Sirius computers, GNSS receivers and related services. The order follows an order for power systems received in September 2024.**

Sirius is AAC Clyde Space's range of computers developed to cater for command and data handling needs of small satellites. Their standardization allows for reliability, a compelling price performance ratio and short delivery times. These high-performing avionics have been flight-proven across multiple missions.

GNSS receivers are electronic devices that receive and digitally process signals from a navigation satellite constellation in order to provide position, velocity and time. Also these avionics have been flight proven across multiple missions.

The avionics will be used in a planned constellation. The name of the client cannot be disclosed at this time.

AAC Clyde Space expects to have completed delivery of the order during the third quarter of 2025.
