

## Safestate Group AB (publ): SafeState Brings Dark Web Monitoring to One of the World's Largest Hosting Providers

**Roll-out begins Q3 2026 at a global hosting & registrar provider serving more than 5 million customers, with further deployments lined up through SafeState's partnership with Monarx.**

Stockholm, Sweden, May 29, 2026. SafeState Group is rolling out its Dark Web Monitoring with one of the world's largest hosting providers, a global business serving more than 5 million small business customers. Deployment begins in Q3 2026, with over 300,000 customers expected to go live in the next 12 months alone and significant growth beyond that.

The deployment is part of SafeState's wider partnership with Monarx, the leader in web server security that leverages AI to protect the servers and sites of hosting providers around the world.

SafeState's Dark Web Monitoring continuously scans underground forums, data leak repositories, compromised credential networks targeting customers. It's powered by one of the industry's largest breach databases, fed daily by an in-house data sourcing team. When exposed data or a malicious domain is flagged, the customer is alerted in real time, before criminals can act on it.

Daan Donders, CEO of SafeState: *"A massive milestone, and exactly the kind of roll-out our strategy is built for. We're here to put accessible, low-cost and genuinely effective cybersecurity in the hands of millions and partners like Monarx are how we reach them. Much more to come."*

Cybersecurity at scale is a partnership game. SafeState and Monarx are showing what that looks like.
