

PRESS RELEASE on August 6, 2021

Arctic Minerals has applied for prolongation of extraction permits for the Company's gold-copper project Bidjovagge in Norway

Arctic Minerals has applied for prolongation of extraction permits for the Company's gold-copper project Bidjovagge in Norway. The Company has also been granted six new exploration permits in the area. Arctic Mineral's recent review of geophysical data, together with data from old drill holes, strongly indicates that the ore-bearing zone continues to the north of the old mine area. The ore zone also appears open at depth. Plans for further exploration include a new geophysical (electromagnetic) survey in 2022. For 2021, external consultants have been engaged to update the project's mineral resource. Arctic Minerals has also initiated a process to seek a partner to further develop the Bidjovagge project.

Arctic Minerals has applied for prolongation of extraction permits (Bidjovagge 1-5) for the Company's gold-copper project Bidjovagge in Finnmark, Norway. The application has been filed at DMF (the authority in charge of mineral rights in Norway). Arctic Minerals, through its subsidiary Arctic Gold AB, has in total nine extraction permits at the Bidjovagge project, whereof these five are up for renewal in 2021.

New exploration permits

Arctic Minerals has also applied for, and been granted, five new exploration permits (Buljovarri 1-5) covering the likely northward extension of the ore-bearing zone. In addition, Arctic Minerals has also applied for, and been granted, the new exploration permit Laemssejåkka 32, covering a parallel ore zone.

Study of drill holes

The Company has carried out a study of old drill cores in the Bidjovagge area. These show very promising results in a new area, now covered by one of the newly granted exploration permits. For example, one hole returned a high-

grade intersection of 15.2 metres at 2.0% copper and 8.55 grams/ton gold. Another drill hole, from an area covered by an existing extraction permit, returned an intersection of 27.3 metres at 3.11% copper and 0.58 gram/ton gold.

In addition, the Company has also completed a review of geophysical data. This, together with data from the old drill hole, strongly indicates that the ore-bearing zone continues to the north of the old mine area. The ore zone also appears open at depth.

Plans for further exploration include a new geophysical (electromagnetic) survey in 2022.

Updated mineral resource

For the fall 2021, external consultants have been engaged to update the project's mineral resource. The last update of the mineral resource in Bidjovagge was carried out in 2012.

Partnership

Arctic Minerals has initiated a process to seek a partner to further develop the Bidjovagge project.

Comment from CEO, Jonatan Forsberg:

We have now applied for prolongation of our oldest extraction permits in Bidjovagge, which are up for renewal in 2021. The Company has also been granted six new exploration permits from the Norwegian authorities for mineral rights for further exploration. Recent reviews of geological data and drill holes strongly indicate that the ore-bearing zone in Bidjovagge continues to the north of the old mine area. The ore zone also appears open at depth. For the fall 2021, external consultants have been engaged to update the project's mineral resource. Arctic Minerals has also initiated a process to seek a partner to further develop the Bidjovagge project.

Certified Advisor

UB Securities Ltd, of Helsinki, Finland, (www.unitedbankers.fi) is the Company's Certified Advisor on Nasdaq First North Growth Market, Stockholm.

Other

The company's shares are listed on Nasdaq First North Growth Market, Stockholm under the trade designation "ARCT".
