

## **Cyhone advances the patent portfolio for Rabeximod**

**Cyhone (publ), a biotech company in autoimmune diseases, is pleased to announce that national phase filings have been completed in a large number of relevant markets for four of its pending PCT applications directed to clinically applicable forms and formulations of Rabeximod, as well as their medical use, potentially conferring patent protection until 2041.**

In November 2020 Cyhone reported the filing of five new patent applications through the international patent cooperation treaty (PCT) in order to strengthen the intellectual property protection for Rabeximod. Cyhone today reports the continued advancement of the five PCT applications according to plan, where 4 applications now have successfully converted to national phase. The patents of relevance are:

**PCT/EP2021/065705: ORAL FORMULATION COMPRISING A CRYSTALLINE FORM OF RABEXIMOD**

**PCT/EP2021/065697: RABEXIMOD IN THE TREATMENT OF RHEUMATOID ARTHRITIS**

**PCT/EP2021/065693: NEW USE OF RABEXIMOD**

**PCT/EP2021/065694: METHOD FOR PREPARING A CRYSTALLINE FORM OF RABEXIMOD**

”We are glad to announce that the patent process for our 5 new patent applications is advancing according to plan. The patent process may be difficult to navigate, which requires the assistance of skilled patent attorneys and dedicated specialists. Four of our five PCT applications have now been converted to national phase applications in relevant national markets. The national phase conversion is an important milestone in the patent journey, indicating that the patents have passed various stages of critical review. The patents if granted will confer patent protection until 2041.” comments Carl-Magnus Högerkorp, CEO, Cyhone
