

Wyld Networks launches the AT452 Satellite Tracker for GPS location data for asset tracking

The Wyld Connect AT452 Satellite Tracker is a comprehensive solution for location-based tracking utilising the power of low earth orbiting satellites to provide global network coverage. In a World-first, following successful trials in South America of this unique solution, Wyld is commencing deployment, starting with Brazil.

If your business needs to know the location of assets in transit, of assets that are on the move continuously, regularly or in frequently then the AT452 Satellite Tracker with low power consumption can deliver your asset location data to your end application.

Here are the key features and benefits:

1. **No Additional Ground Infrastructure Needed:** The data transmitted via the AT452 Satellite Tracker is received directly through the satellite constellation, eliminating the need for extra ground-based infrastructure.
2. **Simplified Global Deployments:** By exploiting satellite networks, vast areas of otherwise uncovered land and at sea are now reachable, removing the complexities of managing multiple country service contracts and roaming fees, providing a single, simple solution.
3. **Cost-Effective IoT Connectivity:** By leveraging Wyld Networks IoT satellite network, the AT452 Satellite Tracker offers a low-cost, reliable one-way data communication solution ideal for the asset tracking market.

The AT452 Satellite Tracker streamlines the process of adding satellite IoT GPS data capabilities to assets in remote locations, offering a reliable, cost-effective, and globally applicable solution for asset tracking. Use cases are multifarious but will include deployments with containers, pallets, unmanned floating platforms, buoys, agricultural equipment and more.

"The new AT 452 Satellite Tracker solves a major known business challenge across multiple vertical markets. How to collect GPS data on the 85% of the earth's surface that has no cellular coverage," said Alastair Williamson, CEO Wyld Networks. "This solution solves this issue and will enable other sensor data such as temperature, pressure and humidity to be related to location."

About Wyld Networks AB

Wyld Networks develop and sell innovative wireless technology solutions that enable affordable connectivity anywhere in the World, addressing the problems for businesses and people regarding the lack of global mobile network coverage. The solutions are mainly targeted to wireless connectivity for the Internet of Things (IoT) and people.

Wyld Networks Ltd was formed in Cambridge, UK in 2016 and is a wholly owned subsidiary of Wyld Networks AB. The Wyld Networks share (WYLD) is traded on the Nasdaq First North Growth Market. Certified Adviser is Mangold Fondkommission AB (tel +46 8-5030 1550, email ca@mangold.se).
