

UNIBAP

Press release June 22, 2022

Unibap receives hardware order from US distributor

Unibap's US distributor Moog Inc. is ordering SpaceCloud development units for 150,000 USD with immediate delivery. These iX10-family development units will be distributed to customers in the United States.

This is a follow-on order by Moog Inc. to meet the rapidly growing interest in the iX10-family of application development units. The units will be delivered to customers in the United States who have selected Unibap's SpaceCloud®-solution as the basis for their development.

The order is for 150,000 USD and will be delivered immediately for distribution to customers in the US.

- This deal continues Unibap's introduction of software development solutions for applications ready to be deployed on satellite missions using Unibap's SpaceCloud for on-board processing. Designing and delivering development computers to a customer as a first step in a business relationship has proven to be a successful model. When the customer is pleased with the capacities of the development computer, we then can deliver an Engineering model and finally a Flight model that is launched into orbit. I am very pleased that we now are ramping up our deliveries. We have proved our proficiency with in-orbit demonstrations of our iX5-100-computers and with this deal we are continuing our exciting journey with our next generation high performance on-board processing solutions in the iX10-family by selling a significant number of iX10-ADS development units to our customers.
